What are scanners and how it is useful to me?

Identify stocks basis pre-defined parameters & data. Currently below scanners are available:

- Rising & Falling: Identify stocks basis price movement with volume gainer
- Strong &Weak: It shows the Long / short built up happening for the given underlying. It scans underlying where derivative is enabled. For long built up it identifies stocks where there is rise in price & rise in OI simultaneously, whereas for fall in price with a fall in OI indicates short built up.
- High LowBreakers: Identify stocks crossing day, week, month or 52 week high/low. Investor see them as crucial support /resistance level.
- Resistance &Support: This will show which scrip has reached different level of Resistance and Support or
 which scrip has reached pivot point. This data can be filtered sector wise. Customer can buy or sell on
 the given resistance and support.
- Volume Shocker: Identify stocks basis unusual movement based on week or month volume. Also, track
 the stocks with the potential of unusual volume movement. It helps you to know which stocks have
 gained in volume and shows rising interest of participants in that stock. Generally traders search for this
 type of stocks
- Circuit Breakers: Identify stocks trading at upper or lower circuit which give a view of bullish and bearish.
- Spreads: Identify stocks basis increase/decrease in the difference between future and spot price. Initial spread (i.e. since open) and current spread are given. Customer can take calculated decision.
- Open = Highor Low: Identify stocks with open equals to high or low price. If open = low then that scrip might go up and vice versa.

What is Analytics Option and usage?

- Bullish: You will get In the money & Out of money call stock options contracts appropriate to execute Covered Call strategy
- Bearish: You will get In the money & Out of money put stock options contracts appropriate to execute Covered Put strategy
- Neutral: You will get stock options contracts appropriate to execute Long straddle strategy. It can be used when a stock has been volatile and you anticipate a significant drop in volatility.
- IV Scanner: You will get Call and Put stock options contracts with highest Implied Volatility. If you are purchasing options to open a position, you would like to have a large delta. Then if the asset moves in the direction you predicted, you would reap high gains for a low investment. But you must trade this off against the price of the option. For example, Delta is higher for options that are deeper in-the-money, but they are more expensive. Frequently, a good trade-off is achieved by options that are at-the-money or slightly in-the-money. Delta is also a very important parameter to consider when you are using options to hedge a position, so that you can correctly determine your mix of assets and options. Delta is also known as the hedge ratio.

What additional features as compared to other trading mobile apps does TICK PRO offer?
